History of the Materia Medica collection: (Vilma Gudiene)

The collection represents the medicinal raw materials of Professor Jan Muszynski (1884 -1957), who worked between 1923 and 1939 in the Department of Pharmacognosy at Vilnius Steponas Batoras University. After the liquidation of this pharmacy department in 1939, all belongings of the department were transferred to the Ministry of Education of Lithuania. During the following Second World War it was assumed that the collection had been destroyed. However, one part of Jan Muszynski museum collection (about 150 jars with raw material, native and imported drugs) has been preserved. Since 2007, the remaining drug samples are exhibited in the Museum of the History of Lithuanian Medicine and Pharmacy.
